DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 7-10, drawn to a surface protective film for transparent conductive films and transparent conductive film with said surface protective film, classified in class 349, subclass 158 and tentatively 439/894.
- II. Claims 6 and 11, drawn to a method for manufacturing a surface protective film for transparent conductive films, classified in class 349, subclass 187.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making (II) and product made (I). The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)).

In the instant case (2), the surface protective film having an adhesive layer formed on a side of a base material film may be made by a process wherein removing residual stress and drying of the adhesive are not performed simultaneously.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
